NexaLife – Your Life, Our Promise

Full Workflow

1. User Personas (System Roles)

NexaLife operates with four distinct roles, each with clearly defined responsibilities.

Role	Description	Key Responsibilities
Admin	System configuration & management	• Create & manage insurance plans • Create staff accounts (Agents, Claims Officers) • Monitor system operations
Customer	Primary user of the platform	• Browse insurance plans • Request policies • Submit documents & nominees • Pay premiums • File claims • Request policy endorsements
Agent	Policy validator	• Review policy requests • Evaluate customer risk • Approve or reject policies • Process endorsement requests
Claims Officer	Claim verification & settlement	• Review submitted claims • Investigate claim details • Approve and settle claims • Reject invalid claims

2. Module 1 — Registration & Authentication

Customer Registration

A new user creates an account on the platform.

Workflow

- User opens the application home page
- Navigates to /register
- Customer provides: Name, Date of Birth, Bank Details, Account Number, IFSC Code, Password
- System creates the Customer account

Staff Onboarding (Admin)

Admin creates system staff accounts from the administration panel.

Workflow

- Admin logs in to the system
- Navigates to /admin/users/create
- Creates accounts for roles: Agent, Claims Officer

Login Process

All users log in via /login. The system validates credentials, generates a JWT Token, and stores UserId and Role. Users are then redirected to their role-based dashboard:

Role	Dashboard URL
Customer	/dashboard/customer
Admin	/dashboard/admin
Agent	/dashboard/agent
Claims Officer	/dashboard/officer

3. Module 2 — Plan Management (Admin)

Admin manages all insurance plans available on the platform.

Create a Plan

- Admin navigates to /admin/plans
- Creates a new plan via /admin/plans/create
- Plan details: Coverage Amount, Premium Rules, Policy Term, Eligibility Criteria

Modify Plans

- Admin can update or delete existing plans
- Route: /admin/plans/edit/:id

4. Module 3 — Policy Lifecycle (Customer & Agent)

The policy lifecycle spans from plan discovery through to premium payment, involving both the customer and the agent.

Step 1 — Plan Discovery

- Customer browses plans at /plans and /plans/:id
- View coverage details, compare plans, and select a suitable plan

Step 2 — Policy Request

- Customer requests a policy via /request-policy/:planId
- Provides: Age, Income, Occupation, Aadhaar details

> Policy status → Submitted

Step 3 — Agent Review

- Agent views pending requests at /agent-policies
- Evaluates: Risk category, Customer age, Income, Coverage requested
- Agent calculates the applicable premium

Step 4 — Agent Decision

Approved ✓	Rejected ✕
Policy Status → Approved Initial premium invoices generated	Policy Status → Rejected

Step 5 — Customer Documentation

- Customer completes policy profile via /policy/:id
- Submits nominee details — total allocation must equal 100%
- Example: Nominee 1 → 60%, Nominee 2 → 40%
- Uploads: Address Proof, Income Proof, Nominee ID Proof

Step 6 — Policy Activation

- System verifies all submitted documents and nominee details

> Policy status → Active

Step 7 — Premium Payment

- Customer views payment schedule at /payment-schedule/:policyId
- Customer pays premium invoices as per schedule
- Payment records are stored in the system

5. Module 4 — Claims Management (Customer & Claims Officer)

This module governs the entire claims lifecycle, from filing by a nominee through to final settlement or rejection.

Step 1 — Claim Filing (By Nominee)

- Nominee raises a claim via /raise-claim after an insurable event
- Required: Cause of death, Date of death, Bank details for settlement
- Validations: Death date must be after policy start date; Nominee must match registered record; Claim amount ≤ Sum assured

> Claim status → Submitted — assigned to a Claims Officer

Step 2 — Claim Document Upload

- Nominee uploads supporting documents
- Documents: Death Certificate, Medical Reports, Additional Evidence

Step 3 — Claims Officer Review

- Officer views claims via /officer-claims and begins investigation
- Claim status → UnderReview
- Verifies: Nominee identity, Policy validity, Payment history, Uploaded documents

Step 4 — Claim Decision & Settlement

Approved ✓	Rejected ✕
Claim Status → Settled Officer provides Settled Amount Payment transferred to nominee bank account Transaction reference generated (e.g. TXN-CLM-1002-20260304)	Claim Status → Rejected Officer must provide a mandatory rejection reason

Special Business Rules

Rule 1 — Policy Closure After Claim

> If a claim is settled, Policy Status changes to Closed. No further claims are allowed for that policy.

Rule 2 — Customer Deactivation

> If all policies are closed after claims, Customer Status changes to Inactive. Inactive customers cannot request new policies.

6. Module 5 — Endorsements / Policy Modifications

Customers can request modifications to their active policies.

Step 1 — Endorsement Request

- Customer submits a request via /endorsement/request
- Examples: Change address, Update nominee, Update contact details

Step 2 — Agent Verification

- Agent reviews pending requests at /endorsement/pending
- Agent chooses to Approve or Reject

Step 3 — Policy Update

- If approved, all changes are applied to the live policy record

7. Backend Module Mapping

The following table maps each backend controller to its core responsibility within the NexaLife platform.

Controller	Responsibility
AuthController	Handles login, registration, and JWT authentication
DashboardController	Provides dashboard metrics for each role
AdminController	Handles staff creation and system administration
PolicyController	Manages policy lifecycle and policy creation
ClaimController	Handles claim submission and settlement
EndorsementController	Manages policy modification requests
PaymentController	Handles invoice generation and payment tracking
NotificationsController	Handles system notifications and alerts
